Re: New ITTF Glue Rules

Table Tennis Australia (TTA) would like to remind all players of the new ITTF Glue Rules that come into effect in Australia on the 1 January 2008 for Juniors and 1 September 2008 for Seniors.

TTA is awaiting the arrival of an Enez device for testing glue but in the interim no gluing facility should be provided at any Junior event.

TTA is awaiting further advice from the ITTF about possible sanctions for players who do return a positive test or are seen gluing using illegal glue.

Please see below the original announcement by the ITTF regarding gluing and also an advertisement from Aussie Table Tennis for water base glue.

The International Table Tennis Federation

ANNOUNCEMENT REGARDING GLUE

Based on a majority decision taken by the Board of Directors of the ITTF, Glues containing harmful volatile compounds are no longer approved by the ITTF effective immediately. Although it is felt by the Board of Directors that the current levels of volatile compounds in Glues used to affix rubber coverings to the table tennis blade are in very small quantities and if applied correctly in a ventilated area provide no serious health risk to the players, it is felt, however, that long term use of such glues may have negative health effects. Therefore, **as of immediate effect the ITTF informs all players to cease using glues containing volatile compounds (VCs).**

It is, therefore, the responsibility of each player, or his/her parents in case of minors, to cease using glues containing VCs. Any player using such glues will be doing so at his/her own risk and the ITTF will not be held responsible of any consequences or ill effects resulting from the use of such glues.

All existing ITTF approvals of glues are WITHDRAWN effective immediately. This withdrawal applies to ALL glues currently on the market. The ITTF will cease to approve any type of glue effective immediately. However, the ITTF's current "racket testing" programme and protocols will continue, which controls the amount of VCs in a racket in order to protect the health of the players.

The ITTF will publish and circulate widely a list of available glues that are free of volatile compounds. This list will be updated regularly on the ITTF's website.

As of 1 January 2008 for ITTF Junior events, and as of 1 September 2008 for all other ITTF events, the ITTF will implement a new zero tolerance racket testing programme and protocol, using the "e-nez" and RAE instruments to ensure that all rackets used by players are VC free.

In addition, as of today, in the case that a proven severe health incident occurs and is confirmed by the medical authority recognized by the ITTF, then the ITTF would implement the new testing

programme immediately (VC free) at that date (confirmation of the incident) and sanctions would be applied for failed tests. An exact **legal** announcement of this procedure will be made shortly by the ITTF.

The ITTF urges all parties involved, players, national associations, continental associations, manufacturers, and parents to act accordingly.

Adham Sharara
President

Aussie Table Tennis offers a Water Base Glue called Aqua Energy Glue by Stiga. This ITTF approved Water Based Glue has no VOC's or toxins so no damage to your health.

Aqua Energy gives a good sponge-blade application and adds a loud 'click' to freshly glued rubbers.

This glue is available for just \$35. To order please contact Aussie Table Tennis on (02) 8722-0103 or visit the website at **www.AussieTableTennis.com**
